

International Certificate in Sports Chiropractic (ICSC) Seminar Hybrid Program Asynchronous and Synchronous

Helping athletes achieve their optimal performance naturally

ICSC Seminar International Instructor Pool

FICS have an international instructor pool, drawing some of the best instructors in their field from over seven different countries. This provides our doctors and students with a global approach to their education. There will be a myriad of athletes from different regions expecting different types of care that is appropriate for their region. The global approach to the ICSC education is really appropriate for that type of kind of specialty as a sports chiropractor. Our pool of Instructors delivering the Asynchronous and Synchronous parts of the course will depend on the country where FICS are delivering the seminar. Instructors are chosen based on their ability and their location to attend seminars.

ICSC Seminar **Upper Extremity** Asynchronous Program

Delivered as a combination of live webinars and pre recordings. This theory component is the pre-requisite for attendance at the face-to-face seminar and delivered as a refresher of the ICSC online learning module one month prior to attending the seminar.

Sports Concussion

Refresher of the background theory / physiology / neuroscience of each of the tests prior to the hands-on.

Presentation: 02:30:00

Section Exam: 5 questions

Mopal/CMT Theory – **Upper Extremity**

Presentation 02:00:00

Section Exam: 5 questions

Taping – **Upper Extremity**

Presentation 02:00:00

Section Exam: 5 Questions

Soft Tissue Interventions – **Upper Extremity**

Presentation 02:00:00

Section Exam: 4 questions

Upper Extremity Assessment of Sports Injuries

Presentation 01:00:00 – Shoulder

Presentation 01:00:00 – Hand, Wrist and Finger

Section Exam: 5 Questions

Enrolled candidates must hold a certificate of completion from this Asynchronous part of this course to attend the Face-to-Face session.

The online learning portion of this seminar is
CEU 10.5 hours **Upper Extremity**

Upper Extremity – 10.5 hours

ICSC Seminar – Upper Extremity Synchronous Program

This section is all hands on with instructor demonstration, scenarios and assessment of student skills. This is supported with Asynchronous learning prior to awarding of the ICSC certification. The Asynchronous learning includes the ICSC online learning modules and the ICSC pre theory recordings conducted one month prior to attending this face-to-face assessment.

Sports Concussion – 02:00:00

- Concussion on field recognition practical scenarios
- Concussion assessment initial and secondary assessment
- Concussion management assessment

Mopal/CMT – Lab Upper Extremity 02:00:00

- Shoulder, wrist, hand and finger

Soft Tissue Interventions – Lab Upper Extremity – 02:00:00

- Shoulder, wrist, hand and finger

Taping – Lab Upper Extremity 02:00:00

Taping methods to support injury management and recovery using rigid and kinesiology tape.

- Shoulder, wrist, hand and finger

Practicum Assessment – Upper Extremity 02:00:00

- Shoulder, wrist, hand and finger

The Face-to-Face portion of this program is
CEU 10 hours Synchronous + 10.5 hours Asynchronous

** student must hold a certificate of completion from the
Asynchronous part of this course to attend.

Upper Extremity seminar – total 20.5 hours

Upon completion of this course, learners should be able to:

- Develop techniques which sports chiropractors can do to support athletes in the sporting setting
- Understand emergency procedures and the role of sports chiropractors regarding international games

ICSC Seminar **Upper Extremity Objectives**

Below is the course objectives for each module.

Sports Concussion – 4.5 hours

Concussion Updates (2 hours live, 2.5 hours asynchronous)

- The learner will become familiar with head injury in sport
- The learner will review head injury assessment procedure on the field
- The learner will gain skill at concussion evaluation procedures in the office
- The learner will understand the difference in assessment of vestibular, cervical and oculomotor symptoms as it relates to concussion
- Concussion lab will allow the student to practice concussion evaluation skills

Mopal/CMT – 4 hours

Motion Palpation/CMT (2 hours live, 2 hours asynchronous)

- The course objective is to acquaint the student with the upper extremity and the biomechanical aspects of manipulation of the upper extremity
- The student will learn the coupled motions of upper extremity joint movement
- Functional upper extremity adjusting will be learned and practiced in a lab setting
- Understanding the aspects of upper extremity motion palpation
- The student will gain the concept of sport biomechanics and how this may pertain to upper extremity joint functionality

Taping – 4 hours

Upper Extremity Taping Techniques in Sport (2 hours live, 2 hours asynchronous)

- The student will gain knowledge in skin prep for taping
- The learner will understand indications and contraindications in taping the athlete
- The overall objective of this module is to acquaint the student with skill in taping a variety of sport injuries for healing and optimal performance
- Taping lab will take the student on a journey in learning functional taping

Enrolled candidates will complete both the theory and hands on sessions to be deemed competent in the above module.

ICSC Seminar **Upper Extremity Objectives**

Below is the course objectives for each module.

Soft Tissue Interventions (Theory 2 hours)

Soft Tissue Interventions of the upper extremity (2 hours asynchronous)

- The course objective is to review techniques of soft tissue interventions that are used in sport
- The learner will understand and review the indications of soft tissue interventions
- The learner will understand the contraindication in the application of soft tissue techniques
- The student will gain knowledge in conditions that would benefit from soft tissue techniques

Soft Tissue Interventions (Practicum 2 hours)

Rehabilitation Techniques (2 hours live)

This part of the course objective is to review the basis of assessment and rehabilitation in the athlete;

- The student will understand the idea of load and intensity progression in corrective exercises
- The learner will gain knowledge in the progress in the return to sport plan
- Practical application of rehabilitation programs will be reviewed, and the learner will understand the indications of corrective exercises
- The student will gain an understanding of contraindications in exercise progression

Enrolled candidates will complete both the theory and hands on sessions to be deemed competent in the above module.

ICSC Seminar **Upper Extremity Objectives**

Below is the course objectives for each module.

Upper Assessment (4 hours)

(2 hours live, 2 hours asynchronous)

Shoulder

- To learner will gain the skills in evaluation of the shoulder
- The learner will understand the mechanism of injury and how it relates to diagnosis of a shoulder injury
- The learner will gain knowledge of the most common shoulder injuries in sport
- The learner will understand acute care, subacute and chronic care in shoulder injuries in sport
- The learner will gain the knowledge in the rehabilitation protocols in shoulder injuries.

Elbow and Hand Course Objectives

- To learner will gain the skills in evaluation of the elbow
- The learner will understand the mechanism of injury and how it relates to diagnosis of an elbow injury
- The learner will gain knowledge of the most common elbow injuries in sport
- The learner will understand acute care, subacute and chronic care in elbow injuries in sport
- The learner will gain the knowledge in the rehabilitation protocols in elbow injuries.

Upper Extremity Course Summary:

20.5 hours - continual education credits

1. Course instructional hours are actual times of instruction
2. Reading Content- 20 minutes per document
3. Quizzes post-module sections- 1 minute per question
4. Module Exams – 1 minute per question

Enrolled candidates will be required to complete both the theory and hands on sessions and take part in all **Practicum Assessment to meet the requirement of this unit and attend a certificate of completion.**
